

GRAGGABER
DIE GEBIRGSLÄRCHÉ.

SZENA

PRODUCT INFORMATION

Produced using sustainable methods from hand-selected and finger jointed **Austrian mountain larch**

High-quality sawing method (**rift and semi rift** = vertical growth rings) plus meticulous further refinement minimise splintering and warping and ensure outstanding durability

Application: **Service Class III** (exposed to weathering, no earth contact) - **not load-bearing** -

- Store the packages lying flat in a dry and unheated location
- Check the wood moisture content on a sample basis (ideal: **10-14%**; also up to 18% in isolated cases)
- Every slat has its own natural fluctuations in structure and colour. You may therefore presort the slats according to their overall appearance, if desired
- As you do so, turn the side you consider to be "nicer" towards the top or outside
- Use any individual, divergent pieces for cutting out or less-visible locations

INSTALLATION

- For installation, only use suitable screws and fixation elements of stainless steel or special weatherproof plastics
- There can be no claims for material that has already been processed

TYPICAL WOOD CHARACTERISTICS WHEN USED OUTDOORS

- SZENA® is sorted and processed with the greatest possible care. Still, fine cracks, isolated knots, splinters and instances of resin bleed remain unavoidable over a longer period of time
- The individual darkening and typical silvery greying of the mountain larch ("patina") also have no detrimental effect upon either the function or durability

CARE / MAINTENANCE

- The use of a surface treatment is not compulsory with SZENA®
- If you would like an additional surface treatment, consult with your local specialist shop regarding suitable oils or stains. Observe the recommendations of the respective manufacturer for application and care.
- Please bear in mind that all treatment systems must be properly maintained later on!

CLEANING:

- ✓ Sweep with a soft broom (with natural or synthetic bristles!)
- ✓ For slippery films: Use a brush plus water or a mild, lukewarm soap solution
- ✗ Chemical cleaning agents are not recommended
- ✗ Do not use a wire brush
- ✗ Please protect SZENA® from the penetrating jet of a high-pressure cleaner
